## 1.0 Generalita'

TRAMEC si presenta oggi sul mercato con la nuova gamma di riduttori a vite senza fine con le seguenti serie:

### Serie X

Riduttore a vite senza fine con corpo monolitico caratterizzato da una alta modularità di fissaggio grazie alla lavorazione in tolleranza di tutti i piani di appoggio.

## 1.0 General information

TRAMEC has introduced on the market a new range of worm gearboxes available in series:

### Series X

Worm gearbox with monolithic body. Thanks to tolerance machining of all faces, the X series stands out for its high modularity of fastening options.

## 1.0 Allgemeines

TRAMEC hat auf dem Markt eine neue Auswahl an Schneckengetriebe in Serien aufgebracht:

### Serien X

Schneckengetriebe mit monolithischem Gehäuse. Dank der Bearbeitung mit Toleranz der Ablageflächen ist die X Serie durch die umfangreiche Modularität der Befestigungsmöglichkeiten gekennzeichnet.

### Serie K

Riduttori a vite senza fine con forma rotonda che consente ingombri e pesi inferiori. Svariate possibilità di versioni sono facilmente ottenibili anche grazie ai suoi particolari di collegamento (piedi e flange) che sono separati.

### Serie K

Worm gearboxes with round shape are light in weight and require reduced space. The coupling parts (feet and flanges) are separated and therefore offer the possibility to obtain countless versions.

### Serien K

Schneckengetriebe in rundem Gehäuse weisen ein geringes Gewicht auf und benötigen weniger Platz. Die Anbauteile (Fuesse und Flansche) sind modular aufgebaut, wodurch viele unterschiedliche Versionen möglich sind.

### Serie H

Riduttore a vite senza fine con precoppia cilindrica con corpo monolitico. Si ottengono così rapporti più elevati conservando un buon rendimento.

### Serie H

Worm gearbox with cylindrical pre-stage module and single piece body. It offers higher ratios by maintaining a good efficiency.

### Serien H

Schneckengetriebe mit zylindrischem Vorstufen-Modul und einteiligem Gehäuse. Es bietet höhere Untersetzungen bei gleichzeitig guter Effizienz.

### Serie KX - XX - KK

Riduttore combinato a doppia vite senza fine caratterizzato da elevate riduzioni di velocità.

### KX - XX - KK Series

Worm gearbox with cylindrical pre-stage Combined worm gearbox with double worm shaft, it offers high speed reductions.

### Serien KX - XX - KK

Kombinierte Doppelschneckengetriebe ermöglichen eine hohe Anzahl an Untersetzungsmöglichkeiten.

### 1.1 Unità di misura

### 1.1 Measurement units

### 1.1 Masseinheiten

Simbolo Symbol Symbol	Unità di misura Measurement unit Maßeinheit	Definizione	Definition	Beschreibung
FS'		Fattore di servizio riduttore	<i>Gearbox service factor</i>	Betriebsfaktor des Getriebes
FS		Fattore di servizio dell'applicazione	<i>Application service factor</i>	Betriebsfaktor der Anwendung
$i_1$		Rapporto di riduzione del 1° riduttore	<i>Ratio of 1st gearbox</i>	Untersetungsverhältnis des 1. Getriebes
$i_2$		Rapporto di riduzione del 2° riduttore	<i>Ratio of 2nd gearbox</i>	Untersetungsverhältnis des 2. Getriebes
$i_n$		Rapporto di riduzione	<i>Reduction ratio</i>	Untersetungsverhältnis
$M_{2S}$	[Nm]	Coppia di slittamento	<i>Slipping torque</i>	Rutschmoment

$T_2$	[Nm]	Momento torcente motoriduttore	<i>Gear motor torque</i>	Getriebemotor Drehmoment
$T_C$	[Nm]	Momento torcente da utilizzare per la scelta del riduttore	<i>Torque to be used for the selection of the gearbox</i>	Drehmoment, das zur Wahl des Getriebe zu benutzen ist
$T_2'$	[Nm]	Momento torcente richiesto	<i>Required Torque</i>	benötigtes Drehmoment

### 1.2 Potenza

### 1.2 Power

### 1.2 Leistung

P = Potenza massima applicabile in entrata con vite ad albero maschio riferita alla velocità  $n_1$  con un fattore di servizio FS = 1 e a un servizio continuo S1.

$P_1$  = Potenza motore consigliata riferita alla velocità  $n_1$  con il fattore di servizio FS riportato in tabella a pag. 4 e a servizio continuo S1.

E' possibile determinare la potenza necessaria in entrata P' in base alla coppia  $T_2'$  richiesta all'applicazione secondo la seguente formula:

P = max. power applicable at input with male worm shaft, referred to  $n_1$  speed, service factor FS=1, on S1 continuous

$P_1$  = recommended motor power, referred to  $n_1$  speed, service factor FS as reported in the table on page 4, on S1 continuous duty.

The power necessary at input on the basis of  $T_2$  torque required by the application can be calculated with the following formula:

P = am Antrieb max. anwendbare Leistung, mit Schneckenwellenzapfen bez.  $n_1$  Antriebsdrehzahl, Betriebsfaktor FS=1 und S1 Dauerbetrieb.

$P_1$  = beratene Motorleistung bez.  $n_1$  Drehzahl, FS Betriebsfaktor (wie es in der Tabelle auf Seite 4 angegeben wird) und S1 Dauerbetrieb.

Die am Antrieb erforderliche Leistung P' (auf Grund des von der Anwendung verlangten  $T_2$  Drehmoments) kann wie folgt kalkuliert werden:

$$P' = \frac{T_2' \cdot n_2}{9550 \cdot Rd} \quad [kW]$$

### 1.3 Rapporto di riduzione

### 1.3 Reduction Ratio

### 1.3 Untersetungsverhältnis

$i_n$  = È il rapporto di riduzione della velocità, definito come:

$i_n$  = speed reduction ratio, defined as follows:

$i_n$  = Drehzahluntersetungsverhältnis, wird wie folgt definiert:

$$i_n = \frac{n_1}{n_2}$$

### 1.4 Momento torcente

### 1.4 Torque

### 1.4 Drehmoment

$T_{2M}$  = È la massima coppia trasmissibile in uscita del riduttore con carico uniforme riferito alla velocità  $n_1$  con un fattore di servizio FS = 1 e a servizio continuo S1.

$T_2$  = È la coppia in uscita del motoriduttore riferita alla velocità  $n_1$  alla potenza  $P_1$ , con il fattore di servizio FS riportato in tabella e a servizio continuo S1.

$T_{2M}$  = max. torque transmissible at gearbox output with uniform load, referred to  $n_1$  speed, service factor FS = 1, on S1 continuous duty.

$T_2$  = output torque transmissible to the geared motor, referred to  $n_1$  speed,  $P_1$  power, FS service factor as reported in the table, on S1 continuous duty.

$T_{2M}$  = am Getriebeabtrieb max. übertragbaren Drehmoment, bei gleichmäßiger Last bez.  $n_1$  Drehzahl, Betriebsfaktor FS = 1 und S1 Dauerbetrieb.

$T_2$  = übertragbares Abtriebsdrehmoment, bezogen auf die Antriebsdrehzahl  $n_1$ , die Leistung  $P_1$  und dem in der Tabelle angegebenen Betriebsfaktor FS bei Dauerbetrieb S1.

$$T_{2M} = \frac{9550 \cdot P_1 \cdot Rd}{n_2} \quad [Nm]$$

### 1.5 Fattore di servizio FS

È il valore che tiene in considerazione le varie condizioni di funzionamento:

- tipologia di applicazione ovvero natura del carico (A-B-C)
- durata di funzionamento (ore giornaliere h/d)
- numero di avviamenti/ora

Il coefficiente così trovato (FS) dovrà essere uguale o inferiore al fattore di servizio del riduttore da adottare FS' dato dal rapporto tra la coppia  $T_{2M}$  indicata a catalogo e la coppia  $T_2'$  richiesta dall'applicazione.

### 1.5 FS Servo motor

Value which takes the different operating conditions into consideration:

- type of application or type of load (A-B-C)
- length of operation (hours per day h/d)
- number of start-ups/hour

This coefficient (FS) will have to be equal or lower than the FS of selected gearbox FS' given by the ratio between  $T_{2M}$  torque mentioned in the catalogue and the  $T_2'$  torque required by the application.

### 1.5 Betriebsfaktor FS

Wert, der die verschiedenen Betriebsbedingungen in Betracht zieht:

- Art der Anwendung oder Art der Last (A-B-C)
- Betriebsdauer (Stunden pro Tag)
- Zahl der Starten pro Stunde

Der so berechnete Koeffizient (FS) muss kleiner oder gleich dem Betriebsfaktor FS' des Getriebes sein, welcher sich aus dem Verhältnis zwischen dem im Katalog angegebenen maximalen Drehmoment  $T_{2M}$  und dem von der Anwendung benötigten Drehmoment  $T_2'$  ergibt.

$$FS' = \frac{T_{2M}}{T_2'} > FS$$

I valori di FS indicati in tabella sono relativi all'azionamento del motore elettrico; se utilizzato un motore a scoppio, si dovrà tenere conto di un fattore di moltiplicazione 1.3 se a più cilindri e 1.5 se monocilindro. Se il motore elettrico applicato è autofrenante occorre considerare un numero di avviamenti doppio di quello effettivamente richiesto.

FS values reported in the table refer to employment of an electric motor; should a combustion motor be used, consider a multiplication factor of 1.3 for a multicylinder motor, of 1.5 for a single-cylinder one. If an electric brake motor is used, consider a number of start-ups which is twice as much the number actually required.

Die in der Tabelle angegebenen FS Werte beziehen sich auf Anwendung eines Elektromotors. Falls einen Verbrennungsmotor verwendet wird, dann soll einen Multiplikationsfaktor von 1.3 für Mehrzylindermotor oder von 1.5 für Einzylindermotor in Betracht gezogen werden. Falls es sich um einen Elektro-Bremsmotor handelt, dann ist die Zahl der Starten doppelt zu zählen.

### 1.6 Rendimento

**Rd** - È il rendimento dinamico, definito come rapporto tra la potenza in uscita  $P_2$  e quella in entrata  $P_1$ . Dipende principalmente dalla velocità di strisciamento, dal tipo di lubrificante e dall'angolo d'elica. I valori indicati nelle tabelle sono validi se si applica la corrispondente coppia in uscita. In fase di rodaggio, circa le prime 300 ore di funzionamento sotto carico, il valore deve essere considerato inferiore del 30% rispetto a quello indicato in tabella.

**Rs** - È il rendimento statico che si ha al momento dell'avviamento del riduttore e varia in base al rapporto di riduzione. Risulta importante, per una corretta valutazione del riduttore da impiegare, nelle applicazioni in cui non si raggiungono mai le condizioni di regime come nei funzionamenti intermittenti. Analogamente al caso dinamico, anche il rendimento statico durante il rodaggio risulta inferiore del 30% rispetto al valore indicato in tabella.

### 1.6 Efficiency

**Rd** - dynamic efficiency, defined as the ratio between  $P_2$  output power and  $P_1$  input power. It mainly depends on the slipping speed, the type of lubricant and the lead angle. The values reported in the table are valid when the corresponding output torque is applied. During the first 300 operating hours under load, the value to be considered is 30% lower than that reported in the table.

**Rs** - static efficiency at gearbox start-up; it changes depending on the reduction ratio. Rs value is important for selecting the right gearbox for applications where a steady state is never achieved, as for intermittent duty applications. Same as dynamic efficiency, static efficiency too during the running-in period will be 30% lower than the value reported in the table.

### 1.6 Wirkungsgrad

**Rd** - dynamischer Wirkungsgrad, ist das Verhältnis zwischen  $P_2$  Abtriebsleistung und  $P_1$  Antriebsleistung. Rd Wert wird durch Gleitgeschwindigkeit, Art des Schmiermittels und Steigungswinkel beeinflusst. Die Tabellen zeigen die Werte die gültig sind wenn das entsprechende Abtriebsdrehmoment gegeben ist. Während der Einlaufzeit in den ersten 500 Betriebsstunden unter Belastung, ist dieser Wert 30% niedriger als der in der Leistungstabelle angegebenen Wert.

**Rs** - statischer Wirkungsgrad beim Getriebebestart. Der Wert Rs ist wichtig für die Auswahl des richtigen Getriebes für Anwendungen wo ein stetiger Betrieb nicht auftritt, wie bei Anwendungen mit Aussetzbetrieb. Der statischer Wirkungsgrad auch während der Einlaufzeit wird 30% niedriger als der in der Tabelle angegebenen Wert.

X - K	Rs										
	7.5	10	15	20	25	30	40	50	65	80	100
30	0.67	0.62	0.55	0.47	0.43	0.39	0.30	0.27	0.25	0.22	0.21

130	0.68	0.65	0.59	0.56	0.54	0.43	0.41	0.38	0.34	0.31	0.27

Stabilito il rapporto di riduzione necessario all'applicazione, dove è possibile, è consigliabile utilizzare i diversi tipi di riduttori che offrono, a parità di rapporto, un migliore rendimento dinamico.

Once the reduction ratio required by the application has been established, it is advisable to select a type of gearbox which, ratio being equal, offers better dynamic efficiency.

Nachdem das für die Anwendung erforderliche Untersetzungsverhältnis festgestellt worden ist, wählen Sie bei gleichem Untersetzungsverhältnis einen Getriebetyp, den einen besseren dynamischen Wirkungsgrad aufweist.

## 1.7 Irreversibilità

Nelle applicazioni dove è necessario evitare la trasmissione del moto retrogrado o sostenere il carico, in assenza di alimentazione elettrica, è consigliabile adottare freni esterni.

Nei riduttori a vite senza fine emerge questa caratteristica naturale, denominata grado di irreversibilità, che cresce con l'aumentare del rapporto di riduzione in quanto strettamente legata al relativo rendimento.

Per ottenere alti gradi di irreversibilità occorre quindi adottare i rapporti di riduzione più elevati, senza dimenticare che, il rendimento, tende a crescere durante le prime 500 ore di funzionamento per poi stabilizzarsi sui valori riportati a catalogo.

### Irreversibilità statica

Condizione di impedimento alla rotazione comandata dall'albero lento senza escludere possibili ritorni lenti nel caso in cui il carico sia sottoposto a vibrazioni.

**Rs < 0.45** si ha irreversibilità  
**Rs = 0.45 ÷ 0.55** irreversibilità incerta  
**Rs > 0.55** si ha reversibilità

### Irreversibilità dinamica

Condizione di arresto e quindi di sostegno del carico nel momento in cui cessa l'azione di comando. La condizione è più difficile da ottenere in quanto viene influenzata dal rendimento dinamico, dalla velocità di rotazione, da eventuali vibrazioni che il carico può generare e dalla direzione del movimento rispetto al carico.

Quest'ultima condizione è molto evidente nei sollevamenti: un carico in salita, cessando l'azione di comando, deve arrestarsi e quindi assumere velocità zero (rendimento statico) prima di invertire il moto e cadere per gravità.

Un carico in discesa tende invece a proseguire nel suo moto ostacolato, nella caduta, dal solo rendimento dinamico.

**Rd < 0.45** si ha irreversibilità  
**Rd = 0.45 ÷ 0.55** irreversibilità incerta  
**Rd > 0.55** si ha reversibilità

## 1.7 Irreversibility

*The use of external brakes is advised in case of applications where backwards motion must be hindered and the load must be held should the feed be cut off.*

*Some worm gearboxes feature natural irreversibility. The higher the ratio, the higher is the irreversibility, since it is strictly dependent on the relative efficiency.*

*In order to achieve high irreversibility it is therefore necessary to select higher efficiency reduction ratios not to forget that the efficiency is growing during the first 500 hours life until it stabilizes to the values mentioned in the catalogue.*

### Static irreversibility

*Static irreversibility occurs when the rotation controlled by the output shaft is hindered; possible slow returns cannot be excluded should the load be subject to vibrations.*

**Rs < 0.45** provides irreversibility  
**Rs = 0.45 ÷ 0.55** irreversibility is uncertain  
**Rs > 0.55** reversibility is possible

### Dynamic irreversibility

*Dynamic irreversibility is characterized by stillstand and hold of the load when the drive stops. It is more difficult to achieve this condition because it is influenced by dynamic efficiency, speed of rotation and possible vibrations generated by the motion direction with regard to the load.*

*This last condition is much more evident during the lifting: if the drive stops during the lifting of the load this has to come to a speed equals to zero (static irreversibility) before the reversal of motion rotation and its drop for gravity.*

*On the contrary the load during its descent gets its motion obstructed by its dynamic efficiency.*

**Rd < 0.45** provides irreversibility  
**Rd = 0.45 ÷ 0.55** irreversibility is uncertain  
**Rd > 0.55** reversibility is possible

## 1.7 Selbsthemmung

Aussenbremsen sind bei Anwendungen zu benutzen, bei denen Rückbewegung vermeiden werden muss oder die Last auch im Falle von Fehlen an Speisung gehalten werden muss.

Einige Schneckengetriebe sind selbsthemmend. Je höher die Untersetzung ist, desto höher ist die Selbsthemmung, da diese stark vom jeweiligen Wirkungsgrad abhängig ist. Um eine höhere Selbsthemmung zu erreichen, wählen Sie bitte höhere Untersetzungsverhältnisse.

Bitte beachten Sie, dass der Wirkungsgrad der Getriebe in den ersten 500 Betriebsstunden ansteigt und sich erst anschließend auf die im Katalog angegebenen Werte stabilisiert.

### Statische Selbsthemmung

Statische Selbsthemmung liegt vor, wenn die von Abtriebswelle gesteuerten Drehung gehindert wird. Langsamer Rücklauf ist möglich, falls die Last Schwingungen ausgesetzt wird.

**Rs < 0.45** es liegt Selbsthemmung vor  
**Rs = 0.45 ÷ 0.55** ungewisse Selbsthemmung  
**Rs > 0.55** es liegt Reversibilität vor

### Dynamische Selbsthemmung

Stillstand und Stütze der Last beim Aussetzen der Steuerung. Diese Bedingung ist schwieriger zu erreichen, da sie vom dynamischen Wirkungsgrad, der Drehzahl und von der Last verursachten möglichen Vibrationen abhängig ist

Dieser letzte Fall kommt bei Hubanwendungen stark zu tragen. Wenn der Antrieb während dem Hub stoppt, muss die Last eine Geschwindigkeit von annähernd 0 erreichen (statische Irreversibilität), bevor die Rotation sich umkehrt und die Last durch die Gravitation nach unten fährt. Dem entgegengesetzt bekommt die Last durch die Abwärtsbewegung Ihre dynamische Effizienz.

**Rd < 0.45** es liegt Selbsthemmung vor  
**Rd = 0.45 ÷ 0.55** ungewisse Selbsthemmung  
**Rd > 0.55** es liegt Reversibilität vor

1.8 Gioco angolare

1.8 Backlash

Misurato bloccando l'albero entrata, e ruotando l'albero uscita nelle due direzioni applicando la coppia strettamente necessaria a creare il contatto tra i denti degli ingranaggi, al massimo pari al 2% della coppia nominale (T<sub>2M</sub>).

*Angular backlash measured after having blocked the input shaft by rotating output shaft in both directions and applying the torque which is strictly necessary to create a contact between the teeth of the gears. The applied torque should be at most 2% of the max. torque (T<sub>2M</sub>).*

Nachdem die Antriebswelle blockiert worden ist, darf das Winkelspiel auf die Abtriebswelle bemessen werden. Dabei soll die Antriebswelle in beiden Richtungen gedreht werden und ein Drehmoment ausgeübt werden, das zur Entstehen eines Kontaktes zwischen den Zähnen genuegt. Das ausgeübte Drehmoment soll höchstens 2% des max. von Getrieben garantierten Drehmoment (T<sub>2M</sub>) sein.

1.9 Senso di rotazione

1.9 Direction of rotation

1.9 Drehrichtung

### 1.10 Carichi radiali

Ogni tipo di organo di trasmissione che viene collegato o sull'albero in entrata o in quello di uscita determina carichi radiali rispettivamente  $Fr_1$  e  $Fr_2$ .

I valori riportati in tabella in funzione delle varie velocità in entrata e in uscita sono da considerarsi applicabili come forza agente a metà della sporgenza; per un posizionamento a 1/3 della lunghezza occorre aumentare i valori di tabella del 25% mentre per un posizionamento a 2/3 della lunghezza occorre diminuire gli stessi valori del 25%.

I valori dei carichi assiali applicabili in entrata  $Fa_1$  e in uscita  $Fa_2$  sono indicati nelle tabelle.

Negli alberi bisporgenti, ogni estremità può sopportare un carico radiale pari ai 3/5 dei valori riportati in tabella purché agiscano nello stesso senso e siano di pari intensità

### 1.10 Radial load

Any transmission device coupled to either the input or the output shaft generates radial loads,  $Fr_1$  and  $Fr_2$  respectively.

The load values reported in the table, depending on input and output speed, are to be considered as acting at the half-way point of the projection; if the load is applied at 1/3 of the projection, increase the values in the table by 25%; if the load is applied at 2/3, reduce the values by 25%.

Axial loads applicable at input  $Fa_1$  and at output  $Fa_2$  are reported in the tables.

With regard to double projecting shafts, each end can sustain a radial load which equals 3/5 of the values listed in the table, on condition that they act in the same direction and have the same intensity.

### 1.10 Radial load

Antriebsorgane, die mit der Antriebs- oder Abtriebswelle verbindet werden, bewirken Radialbelastungen ( $Fr_1$  und  $Fr_2$  beziehungsweise).

Die in der Tabelle nach Antriebs- und Abtriebsdrehzahl angegebenen Werte beziehen sich auf Belastungen, die in der Mitte der herausragenden Welle wirken; falls die Belastungen auf 1/3 der Länge wirken, sollen die in der Tabelle angegebenen Werte um 25% erhöht werden; falls sie auf 2/3 der Länge wirken, sollen die Werte der Tabelle um 25% reduziert werden.

Die Werte der anwendbaren Axialbelastungen ( $Fa_1$  am Antrieb und  $Fa_2$  am Abtrieb) werden in den Tabellen angegeben.

Bei doppelseitig herausragenden Wellen darf die Radialbelastung auf jedes Ende 3/5 der nachstehenden Werte betragen, unter die Bedingung dass Stärke und Richtung gleich sind.

### Versioni rinforzate

A richiesta vengono fornite versioni rinforzate con cuscinetti a rulli conici sulla corona in grado di sopportare carichi superiori rispetto a quelli ammessi nelle versioni normali con cuscinetti radiali a sfere.

Essendo tali valori calcolati in funzione della durata dei cuscinetti, occorre valutare attentamente il tipo di versione più idoneo in modo da evitare problemi di tipo strutturale. In particolare, il carico assiale deve agire in modo da comprimere la flangia uscita.

I carichi assiali e radiali riportati in tabella non possono agire contemporaneamente nei loro valori massimi.

Nel caso di eventuale concorrenza delle due forze, queste devono essere limitate in rapporto al tipo di carico prevalente:

1. condizione di prevalenza del carico radiale:

$Fr_2$  = come a tabella  
 $Fa_2$  =  $Fr_2 \cdot 0.37$

### Reinforced versions

Versions reinforced with tapered roller bearings on the worm wheel are available on request. They can bear higher loads compared to standard versions with radial ball bearings.

These values are calculated in relation of the life of bearings therefore it is necessary to select the most suitable version in order to avoid any structural problem.

In particular the axial load must compress the output flange.

The axial and radial loads shown in the table do not have to act simultaneously according to the max. values.

In case of concurrency of both forces these have to be reduced with regard to the prevailing type of load:

1. prevalence of radial load:

$Fr_2$  = as per table  
 $Fa_2$  =  $Fr_2 \cdot 0.37$

### Versionen mit Kegelrollenlager

Auf Wunsch werden Versionen mit Kegelrollenlager auf dem Schneckenrad geliefert. Sie erlauben höheren Lasten in Vergleich zu Standardprodukten mit Schrägkugellager.

Diese Werte sind entsprechend der Lebensdauer der Lager berechnet. Daher ist es erforderlich, die am besten passende Ausführung zu wählen, um Probleme zu vermeiden. Auf alle Fälle die Axialbelastung muss den Abtriebsflansch zusammendrücken.

Die in der Tabelle angegebenen Maximalwerte der Axial- und Radialbelastung sollten nicht gleichzeitig dazwischenkommen.

Falls Axial- und Radialbelastungen auftreten, sollte jene Belastungsrichtung zur Auswahl herangezogen werden, die vom Anteil überwiegt:

1. radialbelastungen überwiegen:

$Fr_2$  = siehe Tabelle  
 $Fa_2$  =  $Fr_2 \cdot 0.37$

**2. condizione di prevalenza del carico assiale:** **2. prevalence of axial load:**

**2. Axialbelastungen überwiegen**

$$Fa_2' = Fa_2 \cdot 0.6$$

$$Fr_2' = Fa_2 \cdot 0.4$$

$$Fa_2' = Fa_2 \cdot 0.6$$

$$Fr_2' = Fa_2 \cdot 0.4$$

$$Fa_2' = Fa_2 \cdot 0.6$$

$$Fr_2' = Fa_2 \cdot 0.4$$

**1.11 Potenza termica**

**1.11 Thermal power**

**1.11 Thermische Leistung**

Nelle tabelle riportate nelle sezioni relative ad ogni tipologia di riduttore sono indicati i valori della potenza termica nominale P<sub>t0</sub> [kW]. Tale valore rappresenta la potenza massima applicabile all'entrata del riduttore, in servizio continuo a temperatura massima ambiente di 30°C, così che la temperatura dell'olio non oltrepassi il valore di 95°C.

The sections dedicated to each type of gearbox contain tables reporting the values of P<sub>t0</sub> rated thermal power (kW). Listed values represent the max. power applicable at gearbox input, on continuous duty and at an ambient temperature of max. 30°C, so that oil temperature does not exceed 95°C.

Für jeden Getriebetyp werden in den relativen Kapiteln die Nennwerte der P<sub>t0</sub> thermischen Leistung angegeben [kW]. Diese Werte entsprechen der max. übertragbaren Antriebsleistung am Getriebe in Dauerbetrieb mit max. Umgebungstemperatur von 30°C, sodass die Öltemperatur unter 95°C bleibt.

**Il valore di P<sub>t0</sub> non deve essere preso in considerazione** se il funzionamento è continuo per un massimo di 1.5 ore seguito da pause di durata sufficiente (circa 1 - 2 ore) a ristabilire nel riduttore la temperatura ambiente.

**P<sub>t0</sub> value is not to be taken into account** if duty is continuous for max. 1.5 hours and followed by breaks which are long enough to bring the gearbox back to ambient temperature (roughly 1 - 2 hours). In order to take the actual operating conditions into account, P<sub>t0</sub> values have to be corrected with the following coefficients, thus obtaining the values of P<sub>tc</sub> corrected thermal power.

**P<sub>t0</sub> Wert ist nicht zu beachten**, falls Dauerbetrieb max. 1.5 Stunden dauert und von Unterbrechungen gefolgt wird, die lang genug sind, damit das Getriebe-temperatur zurück zur Umgebungstemperatur sinkt (ungefähr 1 - 2 Stunden).

I valori di P<sub>t0</sub> devono essere corretti tramite i seguenti coefficienti, così da considerare le reali condizioni di funzionamento, ottenendo i valori di potenza termica corretta P<sub>tc</sub>.

P<sub>t0</sub> Werte sollen durch die folgenden Koeffizienten verbessert werden, damit die reelle Betriebsbedingungen wirklich in Betracht gezogen werden. Mit der folgenden Formel erhält man die Werte der korrekten thermischen Leistung P<sub>tc</sub>.

$$P_{tc} = P_{t0} \cdot ft \cdot fv \cdot fu \text{ [kW]}$$

Dove:  
ft = coefficiente di temperatura  
fv = coefficiente di ventilazione  
fu = coefficiente di utilizzo

Where:  
ft = temperature coefficient  
fv = ventilation coefficient  
fu = utilization coefficient

Dabei ist:  
ft = Temperaturkoeffizient  
fv = Luftkühlungskoeffizient  
fu = Anwendungskoeffizient

I coefficienti di correzione sono ricavabili dalle seguenti tabelle:

Corrective coefficients are shown in the following tables:

Verbesserungskoeffizienten sind aus der nachstehenden Tabelle zu entnehmen:

Ta (°C)	0	5	10	15	20	25	30	35	40	45	50

Dt = minutes of operation per hour

Dt = Betriebsminuten pro Stunde

## 1.12 Selezione

## 1.12 Selection

## 1.12 Wahl

### Scelta del riduttore

### Selecting a gearbox

### Wahl des Getriebes

**A) n<sub>1</sub> = 1400, 2800, 900, 500 min<sup>-1</sup>**

Si sceglierà nelle tabelle delle prestazioni dei riduttori un gruppo che in corrispondenza di un rapporto prossimo a quello calcolato ammetta una potenza:

**A) n<sub>1</sub> = 1400, 2800, 900, 500 min<sup>-1</sup>**

Consult the gearbox unit efficiency table; select a group whose ratio is close to the calculated ratio and which permits power:

**A) n<sub>1</sub> = 1400, 2800, 900, 500 min<sup>-1</sup>**

Aus der Leistungstabellen ist eine Gruppe von Getrieben zu wählen, deren Übersetzungsverhältnis nahe zu dem berechneten Wert ist und die die folgende Leistung erlaubt:

$$P \geq P' \cdot FS'$$

### Scelta del motoriduttore

### Selecting a gearmotor

### Wahl des Getriebemotors

**B) FS = 1**

Si cercherà nelle tabelle delle prestazioni dei motoriduttori un gruppo la cui potenza P1 corrisponda alla P' calcolata.

**B) FS = 1**

Consult the gear motor efficiency table and select a group having power P1 corresponding to calculated P'.

**B) FS = 1**

Wählen Sie aus der Leistungstabelle der motoren eine Gruppe, deren Leistung P1 der berechneten Leistung P' entspricht.

**C) FS ≠ 1**

La scelta dovrà essere effettuata come al punto A) verificando che la grandezza del motore da installare sia compatibile con quelle ammesse dal riduttore (IEC); ovviamente la potenza installata dovrà corrispondere al valore P' richiesto.

**C) FS ≠ 1**

Follow the instructions at point A), checking that the size of the motor to be installed is compatible with the gearbox unit (IEC); obviously, installed power must correspond to the required P' value.

**C) FS ≠ 1**

Folgen Sie die Weisungen unter A). Es ist zu prüfen, dass die Größe des zu installierenden Motor mit dem Getriebe kompatibel ist (IEC); die installierte Leistung soll dem erforderlichen P' Wert entsprechen.

Determinato il riduttore idoneo è necessario verificare che anche gli eventuali carichi aggiuntivi (radiali ed assiali) agenti sugli alberi in uscita e/o entrata rientrino nei valori ammissibili dati a catalogo.

In determinate condizioni applicative può diventare necessario verificare che la potenza assorbita dal riduttore non superi quella del limite termico riportata a catalogo, secondo quanto riportato al punto 1.10 relativamente alla potenza termica.

After having selected the proper gearbox, it is necessary to check out that possible additional loads (radial or axial) on the input and/or output shafts fall within the values reported in the catalogue.

Depending on the application, it might be necessary to check that the power absorbed by the gearbox does not exceed the thermal power limit reported in the catalogue as per paragraph 1.10.

Nachdem das geeignete Getriebe gewählt worden ist, muss es sichergestellt werden, dass zusätzlichen Radial-oder Axialbelastungen auf die Antriebs-oder Abtriebswelle unter den im Katalog gegebenen Werten fallen.

Abhängig von der Art der Anwendung ist es manchmal zu prüfen, dass die von Getriebe absorbierten Leistung unter der Wert der thermischen Leistung liegt, wie es in dem Katalog angegeben wird (Abschnitt 1.10).

### 1.13 Lubrificazione

Tutti i riduttori, eccetto X130 e K130, sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320.

I cuscinetti dell'albero veloce vengono sempre lubrificati con grasso a base sintetica; altri cuscinetti vengono lubrificati solo se la posizione di montaggio non ne garantisce la corretta lubrificazione.

Una scelta oculata del tipo di lubrificante, in funzione delle condizioni operative e ambientali, consente ai riduttori di raggiungere le prestazioni ottimali.

Le prestazioni dei riduttori indicate nelle tabelle dei dati tecnici sono state calcolate considerando l'impiego di olio sintetico.

#### VISCOSITA'

E'uno dei parametri più importanti da considerare nella scelta di un olio ed è influenzabile da diversi parametri quali velocità, temperatura. Riportiamo sinteticamente le valutazioni generali per la scelta della giusta viscosità:

#### Viscosità alta

Usare per basse velocità di rotazione e/o temperature alte.  
(Una viscosità troppo bassa in queste condizioni operative causa una usura precoce).

#### Viscosità bassa

Usare per alte velocità di rotazione e/o temperature basse.  
(Una viscosità troppo elevata provoca diminuzione del rendimento e surriscaldamento).

#### ADDITIVI

In tutti gli oli minerali sono contenuti degli additivi antiusura, EP (più o meno energici), antiossidanti ed antischiuma. E' opportuno assicurarsi che essi siano blandi e non aggressivi nei confronti delle guarnizioni.

#### BASE DELL'OLIO

Può essere minerale o sintetica.  
L'olio sintetico, compensa il costo più elevato con una serie di vantaggi:

- a) minor coefficiente d'attrito (quindi migliore rendimento)
- b) migliore stabilità nel tempo (possibile lubrificazione a vita)
- c) migliore indice di viscosità (migliore adattabilità alle varie temperature).

L'olio a base minerale come vantaggi ha il minore costo e un migliore comportamento in rodaggio.

### 1.13 Lubrication

*All worm gearboxes, except for the type X130 and K130, are supplied with synthetic lubricant, PAG base, viscosity index ISO VG 320.*

*The bearings mounted on the input shaft are supplied with grease, synthetic base; the other bearings are lubricated only if the mounting position does not assure a correct lubrication.*

*Choose the lubricant according to operating and ambient conditions in order to ensure high gear unit performance.*

*Performance data, as shown in the specifications tables, refer to utilization of synthetic oil.*

#### VISCOSITY

*One of the most important parameters to be considered when selecting an oil; it depends on various factors such as speed and temperature. Following are general guidelines for choosing the correct viscosity:*

#### High viscosity

*Use for low rotation speed and/or high temperatures.  
(Under these operating conditions a low viscosity causes premature wear).*

#### Low viscosity

*Use for high rotation speed and/or low temperatures.  
(High viscosity reduces efficiency and causes overheating).*

#### ADDITIVES

*All mineral oils contain additives to protect against wear, EP (more or less strong), anti-oxidizing and anti-frothing. It is advisable to make sure that the action of such additives is bland and not too aggressive on the seals.*

#### OIL BASE

*May be mineral or synthetic.  
Synthetic oil compensates for the higher cost with a series of advantages :*

- a) *lower friction coefficient (consequently improved efficiency)*
- b) *better stability over time (possible life lubrication)*
- c) *better viscosity index (more adaptable to various temperatures).*

*Mineral-base oils offer the advantages of costing less and performing better during the running-in period.*

### 1.13 Ölschmierung

Alle Schneckenradgetriebe mit Ausnahme der Ausführung X130 und K130, werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG 320 geliefert.

Die Kugellager auf der Eingangswelle sind immer mit synthetischem Fett geliefert. Falls die Montage keine korrekte Schmierung versichert, dann sind die restlichen Lager mit Schmiermittel geliefert.

Das Untersetzungsgetriebe wird optimal arbeiten, wenn das richtige Schmiermittel je nach Betriebs- und Umgebungsbedingungen sorgfältig ausgewählt wird.

Daten über Getriebeleistung, wie es in den Tabellen der technischen Daten angegeben wird, beziehen sich auf Schmierung mit synthetischem Öl.

#### VISKOSITÄT

Die Viskosität ist eins der wichtigsten Merkmale, die bei der Auswahl des richtigen Öls zu beachten sind; sie wird von verschiedenen Parametern wie Geschwindigkeit und Temperatur beeinflusst. Im folgenden fassen wir die wichtigsten allgemeinen Hinweise für die Wahl der richtigen Viskosität zusammen:

#### Hohe Viskosität

Geeignet für niedrige Drehzahlen bzw. hohe Temperaturen. (Eine zu geringe Viskosität verursacht unter diesen Betriebsbedingungen frühen Verschleiß).

#### Geringe Viskosität

Geeignet für hohe Drehzahlen bzw. niedrige Temperaturen.  
(Eine zu hohe Viskosität führt in diesem Fall zu einer Verringerung des Wirkungsgrades und zu Überhitzung).

#### ZUSÄTZE

Alle Mineralöle enthalten Antiverschleiß-Zusätze, EP (mehr oder weniger stark), Oxydationsschutzmittel und Schaumverhinderungs-Wirkstoffe. Es soll sichergestellt werden, daß diese Zusätze schwach sind und die Dichtungen nicht angreifen.

#### ÖLGRUNDLAGE

Es kann sich dabei um Mineralöl oder synthetisches Öl handeln.  
Synthetisches Öl ist zwar teurer, bietet jedoch eine Reihe von Vorteilen:

- a) geringerer Reibungskoeffizient (demnach besserer Wirkungsgrad)
- b) bessere Stabilität über lange Zeit (lebenslange Schmierung möglich)
- c) besserer Viskositätsindex (paßt sich besser an verschiedene Temperaturen an).

Die Vorteile von Mineralöl sind die geringeren Kosten und das bessere Einfahrverhalten.

#### 1.14 Installazione

Fissare il riduttore in modo tale da evitare qualsiasi vibrazione e curare l'allineamento del riduttore con il motore e l'utenza utilizzando, quando è possibile, giunti di accoppiamento.

Assicurarsi che gli organi da montare sui riduttori abbiano le tolleranze ISO h6 per gli alberi e ISO H7 per i fori.

Per tutte le altre avvertenze consultare il manuale di "uso e manutenzione" scaricabile dal sito [www.tramec.it](http://www.tramec.it)

#### 1.14 Installation

*Mount the gearbox in such a way that any vibrations are prevented. Check carefully the alignment gearbox / motor / machine and use couplings whenever possible. Check that devices to be mounted on the gearbox feature ISO h6 tolerance for the shafts and ISO H7 for the holes.*

*For all other instructions check the "Use and Maintenance Manual" which can be downloaded from our web site [www.tramec.it](http://www.tramec.it)*

#### 1.14 Installation

Das Getriebe ist so zu installieren, dass allerart Schwingung vorbeugt wird. Auf die Fluchtung Getriebe / Motor / Maschine ist es besonders achtzugeben. Dabei sind Kupplungen womöglich zu benutzen. Die auf dem Getriebe montierten Elemente sollen die folgende Toleranz aufweisen: ISO h6 für die Wellen und ISO h7 für die Bohrungen.

Für weitere Anweisungen laden Sie die "Betriebs- und Instandhaltungsanweisung" aus unsere Webseite [www.tramec.it](http://www.tramec.it) herunter.

### 1.15 Manutenzione

Tutti i riduttori a vite senza fine sono lubrificati a vita con olio sintetico tipo SHELL TIVELA OIL S 320.

Non necessitano quindi di particolari manutenzioni se non il mantenimento della pulizia esterna, evitando l'uso di solventi per non danneggiare guarnizioni o anelli di tenuta, ed il rispetto di tutte le indicazioni e della eventuale sostituzione dell'olio negli intervalli programmati e riportati nel manuale di "uso e manutenzione" scaricabile dal sito [www.tramec.it](http://www.tramec.it)

### 1.15 Maintenance

*All worm gearboxes, except for the type X130 and K130, are lubricated for life with synthetic oil SHELL TIVELA OIL S 320.*

*For this reason they do not require any particular maintenance, except for external cleaning (avoid the use of solvents which might damage gaskets and oil seals) and observance of the schedules for oil change as reported in the "Use and Maintenance Manual" which can be downloaded from our web site [www.tramec.it](http://www.tramec.it)*

### 1.15 Wartung

Alle Schneckengetriebe mit Ausnahme der Ausführung X130 und K130 sind mit synthetischem Öl SHELL TIVELA OIL S 320 lebenslang geschmiert.

Deshalb brauchen sie kein besonderes Instandhalten außer Aussenreinigung und Befolgung der Zeitabstände für Ölwechsel, wie es in der "Betriebs- und Instandhaltungsanweisung" auf unsere Webseite [www.tramec.it](http://www.tramec.it) angegeben wird. Bei der Aussenreinigung benutzen Sie keine Lösemittel, weil sie die Dichtungen beschädigen.

### 1.16 Verniciatura

Le carcasse in ghisa e le flange delle grandezze 90, 110 e 130 sono verniciate di colore BLU RAL 5010 mentre quelle in alluminio delle grandezze 75, 63, 50, 40 e 30 sono sabbiare.

### 1.16 Painting

*Size 90, 110 and 130 have cast iron housings and flanges painted BLUE RAL 5010.*

*The housings of sizes 75, 63, 50, 40 and 30 are made in aluminium and sandblasted.*

### 1.16 Lackierung

Die Gehäuse der Größen 90, 110 und 130 bestehen aus Gusseisen und sind BLAU RAL 5010 lackiert.

Für Größen 75, 63, 50, 40 und 30 ist das Gehäuse aus Aluminium und sandgestrahlt.

## 2.1 Caratteristiche

- I riduttori a vite senza fine della serie X sono disponibili nelle versioni alberata XA e con predisposizione per attacco motore XF-XC.
- La versione XF (campana + giunto), caratterizzata da una più ampia versatilità ai diversi tipi di applicazioni, presenta un più elevato rendimento rispetto a quello della serie compatta XC la quale, a sua volta, presenta il vantaggio di un ingombro più ridotto.
- La carcassa monoblocco è in ghisa nelle grandezze 90, 110 e 130, in alluminio pressofuso per le grandezze inferiori.
- La vite senza fine è in acciaio legato cementato-temprato ed è rettificata.
- La corona ha il mozzo in ghisa con riporto di fusione dell'anello in bronzo.
- Le carcasse in ghisa sono verniciate BLU RAL5010 mentre quelle in alluminio sono sabbiate.
- Viene fornito l'albero uscita cavo di serie ed esiste un'ampia disponibilità di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione, kit protezione albero cavo, kit protezione limitatore di coppia.

## 2.1 Characteristics

- *X series worm gearboxes are available in the following versions : XA with shaft, XF and XC suitable for motor mounting assembling.*
- *The XF version (bell + joint) suits a wider range of applications and provides higher efficiency than the XC compact version, which actually offers reduced space requirement.*
- *The enbloc housing is in cast-iron for sizes 90, 110 and 130, in die-cast aluminium for smaller sizes.*
- *The worm shaft is in case-and quench-hardened alloy steel and ground.*
- *The worm wheel has a cast-iron hub provided with inserted cast-bronze ring.*
- *The housings in cast iron are painted BLUE RAL 5010, those in aluminium are sandblasted.*
- *The hollow output shaft is supplied as standard. A broad range of accessories is available: second input, tapered roller bearings on the worm wheel, output flange, single or double-extended output shaft, torque limiter with through hollow shaft, torque arm, hollow shaft protection kit, torque limiter protection kit.*

## 2.1 Merkmale

- Die Schneckengetriebe der Serie X sind in den Versionen XA mit Welle und XF / XC mit Motoranschluß lieferbar.
- Die Version XF (Glocke + Kupplung), die sich durch ihre zahlreichen Anwendungsmöglichkeiten auszeichnet, bietet höhere Leistung als die Kompaktserie XC, die wiederum Vorteile im Sinne der Platzersparnis mit sich bringt.
- Das Blockgehäuse ist aus Gusseisen für die Baugrößen 90, 110 und 130, aus Aluminiumdruckguß für die kleineren Versionen.
- Die Schnecke ist aus einsatzgehärtetem/abgeschrecktem und daraufhin geschliffenen Legierungsstahl.
- Das Schneckenrad besteht aus einer Nabe aus Gusseisen und einem aufgeschleuderten Gussbronze –Ring.
- Das Schneckenrad aus Gusseisen werden mit BLAU RAL 5010 lackiert, die aus Aluminium werden sandgestrahlt.
- Die Hohlwelle gehört zur serienmäßigen Ausstattung. Zahlreiches Zubehör ist lieferbar: zweiter Antrieb, Kegellager auf das Schneckenrad, Abtriebsflansch, Standard oder doppelseitig herausragende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Hohlwelle, Drehmomentstütze, Schutzvorrichtung für Hohlwelle, Schutzvorrichtung für Drehmomentbegrenzer.

### 2.3 Lubrificazione

I riduttori a vite senza fine serie X, tranne la grandezza 130, sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320. Si raccomanda di precisare sempre, in fase di ordine, la posizione di lavoro desiderata.

### 2.3 Lubrication

*X series worm gearboxes, except for the size 130, are supplied with synthetic lubricant, PAG base, viscosity index ISO VG320. Always specify the required mounting position when ordering the gearbox.*

### 2.3 Schmierung

Schneckengetriebe der Serie X, außer Größe 130, werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert. Im Auftrag bitte immer die gewünschte Einbaulage angeben.

\* **ATTENZIONE:** la coppia massima utilizzabile [T<sub>2M</sub>] deve essere calcolata utilizzando il fattore di servizio: T<sub>2M</sub> = T<sub>2</sub> x FS'

\* **WARNING:** Maximum allowable torque [T<sub>2M</sub>] must be calculated using the following service factor: T<sub>2M</sub> = T<sub>2</sub> x FS'

\* **ACHTUNG:** das max. anwendbare Drehmoment [T<sub>2M</sub>] muss mit folgendem Betriebsfaktor berechnet werden: T<sub>2M</sub> = T<sub>2</sub> x FS'

2.6 **Momenti d' inerzia [Kg.cm<sup>2</sup>]**  
(riferiti all'albero veloce in entrata)

2.6 **Moments of inertia [Kg.cm<sup>2</sup>]**  
(referred to input shaft)

2.6 **Trägheitsmoment [Kg.cm<sup>2</sup>]**  
(bez. Antriebswelle)

## 2.9 Limitatore di coppia cavo passante

## 2.9 Torque limiter with through hollow shaft

## 2.9 Drehmomentbegrenzer mit durchgehender Hohlwelle

Il limitatore di coppia viene consigliato in tutte quelle applicazioni che richiedono una limitazione sulla coppia trasmissibile per proteggere l'impianto e/o preservare il riduttore evitando sovraccarichi o urti indesiderati quanto inaspettati.

È un dispositivo con albero dotato di cavo passante, con funzionamento a frizione, ed è integrato al riduttore, presentando un ingombro limitato.

Concepito per lavorare a bagno d'olio, il dispositivo risulta affidabile nel tempo ed è esente da usura se non viene mantenuto in condizioni prolungate di slittamento (condizione che si verifica quando la coppia presenta valori superiori a quelli di taratura).

La taratura è facilmente regolabile dall'esterno attraverso il serraggio di una ghiera autobloccante che porta a compressione le 4 molle a tazza disposte tra loro in serie.

Il dispositivo non consente:

- l'impiego di cuscinetti a rulli conici in uscita
- funzionamento prolungato in condizioni di slittamento.

Nella tabella seguente vengono riportati i valori delle coppie di slittamento  $M_{2S}$  in funzione del n° di giri della ghiera.

I valori di taratura presentano una tolleranza del  $\pm 10\%$  e si riferiscono ad una condizione statica.

In condizioni dinamiche è da notare che la coppia di slittamento assume valori diversi a seconda del tipo e/o modalità in cui si verifica il sovraccarico: con valori maggiori in caso di carico uniformemente crescente rispetto a valori più contenuti in seguito al verificarsi di picchi improvvisi di carico.

**NOTA:** quando si supera il valore di taratura si ha slittamento.

Il coefficiente di attrito tra le superfici di contatto da statico diventa dinamico e la coppia trasmessa cala del 30% circa.

E' quindi opportuno prevedere uno stop per poter ripartire al valore di taratura iniziale.

*The use of a torque limiter is advised when the application requires the limitation of the transmissible torque to safeguard the plant and/or the prevention of unexpected and undesired overloads or shocks which might damage the gearbox.*

*The torque limiter is a device equipped with through hollow shaft and a friction clutch. It is integrated with the gearbox, therefore the space requirement is limited.*

*Designed to work in oil bath, the device is reliable over time and is not subject to wear unless kept under conditions of prolonged slipping (it occurs when the torque values are higher than the calibration values).*

*Calibration can be easily adjusted from outside by tightening the self-locking ring nut which causes the compression of the 4 Belleville washers arranged in series.*

*The device does not go together with:*

- the use of tapered roller bearings at output
- Prolonged operation under slipping conditions.

*The following table shows the values of  $M_{2S}$  slipping torques depending on the number of revolutions of the ring nut.*

*Calibration values feature a  $\pm 10\%$  tolerance and refer to static conditions.*

*Under dynamic conditions, the values of the slipping torque differ depending to the type of overload: the values are higher if the load increase is uniform, the values are lower if sudden load peaks occur.*

**NOTE:** *Slipping occurs when the setting values are exceeded.*

*The friction coefficient between the contact surfaces from static becomes dynamic and the transmitted torque is approx. 30% lower.*

*It is advisable to have a stop first in order to have a restart based on the initial setting value.*

Die Anwendung eines Drehmomentbegrenzers wird empfohlen, um die Anlage und/oder das Getriebe gegen ungewünschte und unerwartete Überbelastungen oder Stößen zu schützen.

Die Vorrichtung verfügt über eine Welle mit durchgehender Hohlwelle und eine Kupplung. Er ist in dem Getriebe integriert, d.h. der Raumbedarf ist klein.

Der Drehmomentbegrenzer wurde für Betrieb in einem Ölbad entworfen. Er ist zuverlässig über Zeit und verschleissfest (außer wenn Rutschen für lange Zeit besteht: das passiert, wenn das Drehmoment höher als der Eichwert ist).

Die Eichung darf mühelos von außen durch das Anziehen einer selbstsperrenden Mutter ausgeführt werden.

Das Anziehen verursacht die Zusammendrückung der 4 wechelsinniggeschichteten Tellerfeder.

Der Begrenzer sieht das folgende nicht vor:

- die Verwendung von Kegelrollenlager am Abtrieb
- Längerer Rutschbetrieb.

Die nachstehende Tabelle zeigt die Werte der Rutschmomente  $M_{2S}$  abhängig von der Zahl der Umdrehungen der Mutter.

Die Eichwerte weisen  $\pm 10\%$  Toleranz auf und beziehen sich auf statische Bedingungen.

Unter dynamischen Bedingungen hat das Rutschmoment verschiedene Werte je nach Art der Überbelastung. Die Werte sind höher, wenn die Belastung gleichmäßig zunimmt; sie sind niedriger im Falle von plötzlichen Belastungsspitzen.

**BEMERKUNG:** Rutschen tritt auf, wenn die eingestellten Werte überschritten werden. Der Reibungskoeffizient zwischen den Berührungsflächen wird dynamisch anstatt statisch und das übertragene Drehmoment sinkt um ca. 30%.

Es ist daher ratsam, vor dem erneuten Anfahren anzuhalten, um die ursprünglichen Drehmomentwerte zu erreichen.

E' importante notare che la coppia di slittamento non resta sempre la medesima durante tutta la vita del limitatore.

Tende infatti a diminuire in rapporto al numero e alla durata degli slittamenti che, rodando le superfici di contatto, ne aumentano il rendimento.

È quindi opportuno verificare periodicamente, soprattutto durante la fase di rodaggio, la taratura del dispositivo.

Là dove sia richiesto un errore più contenuto nella taratura, è necessario testare la coppia trasmissibile sull' impianto.

Il dispositivo viene consegnato tarato alla coppia riportata a catalogo T<sub>2M</sub> salvo diversa indicazione espressa in fase di ordinazione.

*It is important to note that the slipping torque is not the same for the whole life of the torque limiter. It usually decreases in connection with the numbers and the duration of the slipping which because of the surfaces' lapping will increase the efficiency.*

*For this reason it is advisable to check the calibration of the device at regular intervals, specially during the running-in period. Should a smaller calibration error be required, it is necessary to test the transmissible torque on the plant.*

*The device is supplied already calibrated at the torque reported in the catalogue T<sub>2M</sub>, unless otherwise specified in the order.*

Es ist wichtig zu beachten, dass das Rutschmoment über die gesamte Lebensdauer der Rutschkupplung nicht konstant bleibt, sondern üblicherweise in Verbindung mit längeren Rutschzyklen aufgrund der eingelaufenen Berührungsflächen abnimmt.

Deswegen ist es ratsam, die Eichung der Vorrichtung besonders während der Einlaufzeit zu prüfen.

Falls ein niedriger Eichfehler verlangt wird, ist das übersetzbare Drehmoment auf der Anlage zu testen.

Wenn die Vorrichtung geliefert wird, ist sie schon auf dem im Katalog T<sub>2M</sub> angegebenen Drehmoment geeicht, außer wenn es in der Bestellung anders angegeben wird.

### 3.1 Caratteristiche

- I riduttori della serie a vite senza fine KC si presentano estremamente leggeri grazie alla forma compatta della carcassa in ghisa nelle grandezze 90, 110 e 130, in alluminio pressofuso per le grandezze 30, 40, 50, 63 e 75.
- La serie presenta una svariata possibilità di versioni, con e senza piedi, che la rendono più versatile nell'impiego in ogni tipologia di applicazione.
- La serie K è disponibile esclusivamente nella versione predisposta per attacco motore (PAM) e non con albero entrata maschio.
- La vite senza fine è in acciaio legato cementato-temprato ed è rettificata.
- La corona ha il mozzo in ghisa con riporto di fusione dell'anello in bronzo.
- Le carcasse in ghisa sono verniciate BLU RAL5010 mentre quelle in alluminio sono sabbiate.
- Viene fornito l'albero uscita cavo di serie ed esiste un'ampia disponibilità di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione, kit protezione albero cavo, kit protezione limitatore di coppia.

### 3.1 Characteristics

- *The KC worm gearboxes are extremely light thanks to the compact shape of the housing, which is in cast iron for sizes 90, 110 and 130, in die-cast aluminium for sizes 30, 40, 50, 63 and 75.*
- *This series features a wide range of versions, with and without feet, which makes it extremely versatile for utilization in various applications.*
- *The K series is available for motor mounting version (PAM) only and not with the male input shaft.*
- *The worm shaft is in case-and quench-hardened alloy steel and is ground.*
- *The worm wheel has a cast-iron hub with inserted cast bronze ring.*
- *The cast-iron housings are painted BLUE RAL5010 whereas the aluminium housings are sandblasted.*
- *The hollow output shaft is supplied as standard. A broad range of accessories is available: second input, tapered roller bearings on the worm wheel, output flange, single or double-extended output shaft, torque limiter with through hollow shaft, torque arm, hollow shaft protection kit, torque limiter protection kit.*

### 3.1 Merkmale

- Die Schneckengetriebe der Serie KC sind äußerst leicht dank der kompakten Form des Gehäuses. Das Gehäuse ist aus Gusseisen für Größen 90, 110 und 130, aus Druckgussaluminium für Größen 30, 40, 50, 63 und 75.
- Diese Serie ist in vielen Ausführungen, mit und ohne Füße erhältlich, was eine vielseitige Anwendbarkeit in unterschiedlichsten Applikationen ermöglicht.
- Die Serie K ist nur mit Motoranbau Version (IEC) und nicht mit einer Antriebswelle verfügbar.
- Die Schneckenwelle ist aus einsatzgehärtetem / abgeschrecktem und daraufhin geschliffenem Legierungsstahl.
- Das Schneckenrad besteht aus einer Nabe aus Gusseisen und einem aufgeschleuderten Gussbronze-Ring.
- Gehäuse aus Gusseisen werden mit BLAU RAL5010 lackiert, die Gehäuse aus Aluminium werden sandgestrahlt.
- Die Hohlwelle gehört zur serienmäßigen Ausstattung. Zahlreiches Zubehör ist lieferbar: zweiter Antrieb, Kegellager auf das Schneckenrad, Abtriebsflansch, Standard oder doppelseitig herausragende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Hohlwelle, Drehmomentstütze, Schutzvorrichtung für Hohlwelle, Schutzvorrichtung für Drehmomentbegrenzer.

### 3.3 Lubrificazione

I riduttori a vite senza fine serie K, tranne la grandezza 130, sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320. Si raccomanda di precisare sempre, in fase di ordine, la posizione di montaggio desiderata.

### 3.3 Lubrication

KC worm gearboxes, except for the size 130, are supplied with PAG synthetic lubricant featuring an ISO VG320 viscosity class. Always specify the required mounting position when ordering.

### 3.3 Schmierung

Schneckengetriebe der Serie KC, außer Größe 130, werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert. Im Auftrag bitte immer die gewünschte Einbaulage angeben.

### 3.9 Limitatore di coppia cavo passante

### 3.9 Torque limiter with through hollow shaft

### 3.9 Drehmomentbegrenzer mit durchgehender Hohlwelle

Il limitatore di coppia viene consigliato in tutte quelle applicazioni che richiedono una limitazione sulla coppia trasmissibile per proteggere l'impianto e/o preservare il riduttore evitando sovraccarichi o urti indesiderati quanto inaspettati.

È un dispositivo con albero dotato di cavo passante, con funzionamento a frizione, ed è integrato al riduttore, presentando un ingombro limitato.

Concepito per lavorare a bagno d'olio, il dispositivo risulta affidabile nel tempo ed è esente da usura se non viene mantenuto in condizioni prolungate di slittamento (condizione che si verifica quando la coppia presenta valori superiori a quelli di taratura).

La taratura è facilmente regolabile dall'esterno attraverso il serraggio di una ghiera autobloccante che porta a compressione le 4 molle a tazza disposte tra loro in serie.

Il dispositivo non consente:

- l'impiego di cuscinetti a rulli conici in uscita
- funzionamento prolungato in condizioni di slittamento.

Nella tabella seguente vengono riportati i valori delle coppie di slittamento  $M_{2S}$  in funzione del n° di giri della ghiera.

I valori di taratura presentano una tolleranza del  $\pm 10\%$  e si riferiscono ad una condizione statica.

In condizioni dinamiche è da notare che la coppia di slittamento assume valori diversi a seconda del tipo e/o modalità in cui si verifica il sovraccarico: con valori maggiori in caso di carico uniformemente crescente rispetto a valori più contenuti in seguito al verificarsi di picchi improvvisi di carico.

**NOTA:** quando si supera il valore di taratura si ha slittamento. Il coefficiente di attrito tra le superfici di contatto da statico diventa dinamico e la coppia trasmessa cala del 30% circa.

E' quindi opportuno prevedere uno stop per poter ripartire al valore di taratura iniziale.

*The use of a torque limiter is advisable when the application requires the limitation of the transmissible torque to safeguard the plant and/or the gearbox from unexpected or undesired overloads.*

*The torque limiter is equipped with a through hollow shaft and a friction clutch. It is integrated in the gearbox, therefore space requirement is limited.*

*Designed to be working in oil bath, the device is reliable over time and is not subject to wear unless in case of operation with prolonged slipping (it occurs when the torque values are higher than the calibration values).*

*Calibration can be easily adjusted from outside by tightening of the self-locking ring nut, which causes the compression of the 4 Belleville washers arranged in series.*

*The device does not go together with:*

- the use of tapered roller bearings at output
- prolonged operation under slipping conditions

*The following table shows the values of  $M_{2S}$  slipping torques depending on the number of revolutions of the ring nut.*

*Calibration values feature a  $\pm 10\%$  tolerance and refer to static conditions.*

*Under dynamic conditions the values of the slipping torque will change according to the type of overload: the values are higher if the load increase is uniform; the values are lower if sudden load peaks occur.*

**NOTE:** *Slipping occurs when the setting values are exceeded.*

*The friction coefficient between the contact surfaces from static becomes dynamic and the transmitted torque is approx. 30% lower.*

*It is advisable to have a stop first in order to have a restart based on the initial setting value.*

Die Anwendung eines Drehmomentbegrenzers wird empfohlen, um die Anlage und/oder das Getriebe gegen ungewünschte und unerwartete Überbelastungen zu schützen.

Es handelt sich um eine Vorrichtung mit einer durchgehender Hohlwelle.

Er ist in dem Getriebe integriert, d.h. der Raumbedarf ist klein. Der Begrenzer wurde für Betrieb in einem Ölbad entworfen.

Er ist zuverlässig über Zeit und verschleißfest (ausser wenn Rutschen für lange Zeit besteht: das passiert, wenn das Drehmoment höher als der Eichwert ist).

Die Eichung darf mühelos von aussen durch das Anziehen einer selbstsperrenden Mutter ausgeführt werden. Das Anziehen verursacht die Zusammendrückung der 4 wechelsinnigeschichteten Tellerfeder.

Die Vorrichtung sieht das folgende nicht vor:

- die Verwendung von Kegelrollenlager am Abtrieb
- Längerer Rutschbetrieb

Die nachstehende Tabelle zeigt die Werte der Rutschmomente  $M_{2S}$  abhängig von der Zahl der Umdrehungen der Mutter.

Die Eichwerte weisen  $\pm 10\%$  Toleranz auf und beziehen sich auf statische Bedingungen.

Unter dynamischen Bedingungen hat das Rutschmoment verschiedene Werte je nach Art der Überbelastung. Die Werte sind höher, wenn die Belastung gleichmäßig zunimmt; sie sind niedriger im Falle von plötzlichen Belastungsspitzen.

**BEMERKUNG:** Rutschen tritt auf, wenn die eingestellten Werte überschritten werden. Der Reibungskoeffizient zwischen den Berührungsflächen wird dynamisch anstatt statisch und das übertragene Drehmoment sinkt um ca. 30%.

Es ist daher ratsam, vor dem erneuten Anfahren anzuhalten, um die ursprünglichen Drehmomentwerte zu erreichen.

E' importante notare che la coppia di slittamento non resta sempre la medesima durante tutta la vita del limitatore.

Tende infatti a diminuire in rapporto al numero e alla durata degli slittamenti che, rodando le superfici di contatto, ne aumentano il rendimento.

È quindi opportuno verificare periodicamente, soprattutto durante la fase di rodaggio, la taratura del dispositivo.

Là dove sia richiesto un errore più contenuto nella taratura, è necessario testare la coppia trasmissibile sull'impianto.

Il dispositivo viene consegnato tarato alla coppia riportata a catalogo  $T_{2M}$  salvo diversa indicazione espressa in fase di ordinazione.

*It is important to note that the slipping torque is not the same for the whole life of the torque limiter.*

*It usually decreases in connection with the numbers and the duration of the slipping which because of the surfaces' lapping will increase the efficiency.*

*For this reason it is advisable to check the calibration of the device at regular intervals, specially during the running-in period.*

*Should a smaller calibration error be required, it is necessary to test the transmissible torque on the plant.*

*The device is supplied already calibrated at the torque reported in the catalogue  $T_{2M}$ , unless otherwise specified in the order.*

Es ist wichtig zu beachten, dass das Rutschmoment über die gesamte Lebensdauer der Rutschkupplung nicht konstant bleibt, sondern üblicherweise in Verbindung mit längeren Rutschzyklen aufgrund der eingelaufenen Berührungsfächen abnimmt.

Deswegen ist es ratsam, die Eichung der Vorrichtung besonders während der Einlaufzeit zu prüfen.

Falls ein niedriger Eichfehler verlangt wird, ist das übersetzbare Drehmoment auf der Anlage zu testen.

Wenn die Vorrichtung geliefert wird, ist sie schon auf dem im Katalog  $T_{2M}$  angegebenen Drehmoment geeicht, ausser wenn es in der Bestellung anders angegeben wird.

Nella versione con limitatore non è prevista la fornitura degli alberi lenti.

*The version with torque limiter is supplied without output shafts.*

Die Version mit Drehmomentbegrenzer wird ohne Abtriebswellen geliefert.

#### 4.1 Caratteristiche

- La serie H presenta le stesse caratteristiche della serie X, ma la presenza della precoppia cilindrica in entrata consente la realizzazione di rapporti più elevati o, a parità di rapporto, rendimenti migliori.
- La struttura è composta dalla carcassa monoblocco del riduttore a vite serie XA sull'entrata del quale è fissato il corpo contenente il primo stadio di riduzione.
- La vite senza fine è in acciaio legato cementato-temprato ed è rettificata.
- Gli ingranaggi della prima riduzione hanno dentatura elicoidale con profilo rettificato.
- La corona ha il mozzo in ghisa con riporto di fusione dell'anello in bronzo.
- Viene fornito l'albero uscita cavo di serie ed esiste un'ampia disponibilità di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione.
- Le carcasse in ghisa sono verniciate BLU RAL5010 mentre quelle in alluminio sono sabbiate.

#### 4.1 Characteristics

- *The H series has the same characteristics as the X series with the addition of a spur gear pre-stage at input which provides higher ratios or better efficiency under the same ratios.*
- *The structure is composed of a single piece housing for the XA gearbox, at the input side of this gearbox is fitted the housing containing the first stage reduction.*
- *The worm shaft is ground and in case - and quenchhardened alloy steel.*
- *The gears of the first reduction have a helical toothing with ground profile.*
- *The worm wheel has a cast-iron hub provided with inserted cast-bronze ring.*
- *Hollow output shaft is supplied as standard. A broad range of accessories is available: second input, tapered roller bearings on the worm wheel, output flange, single or double extended output shaft, torque limiter with through hollow shaft.*
- *Housings in cast-iron are painted BLUE RAL5010, whereas those in aluminium are sandblasted.*

#### 4.1 Merkmale

- Die Serie H bietet die gleichen Eigenschaften wie die Serie X. Aufgrund der Stirnrad-Vorstufe bei der Serie H sind jedoch höhere Untersetzungen möglich oder man erhält bei gleichen Untersetzungen einen besseren Wirkungsgrad.
- Diese Ausführung besteht aus dem Blockgehäuse des Schneckengetriebes der Serie XA und einem an den antriebsseitig angebauten Gehäuse, welches die Stirnradvorstufe enthält.
- Die Schnecke ist aus einsatzgehärtetem/abgeschrecktem und daraufhin geschliffenen Legierungsstahl.
- Die Zahnräder der Vorstufe besitzen ein schrägverzahntes Stirnradprofil.
- Das Schneckenrad besteht aus einer Nabe aus Gusseisen und einem aufgeschleuderten Gussbronze-Ring.
- Zahlreiches Zubehör ist lieferbar: zweite Antrieb, Kegelrollenlager auf Schneckenrad, Abtriebsflansch, Standard oder doppelseitig herausragende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Welle, Drehmomentstütze.
- Gehäuse aus Gusseisen werden mit BLAU RAL5010 lackiert, Gehäuse aus Aluminium werden sandgestrahlt.

## 4.3 Schmierung und Einbaulage

I riduttori a vite senza fine H sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320. Si raccomanda di precisare sempre in fase di ordine, la posizione di lavoro desiderata.

*H worm gearboxes are supplied with PAG synthetic lubricant featuring an ISO VG320 viscosity class. Always specify the required mounting position when ordering.*

Schneckengetriebe der Serie H werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert. Im Auftrag bitte immer die gewünschte Einbaulage angeben.

Nei corpi in alluminio 40, 50, 63,75 è presente un solo tappo di riempimento olio.

Aluminium housings size 40, 50, 63 and 75 have only one filling plug.

Aluminiumgehäuse in den Größen 40, 50, 63 und 75 haben nur eine Einfüllengsschraube

### 4.3 Lubrificazione e posizioni di montaggio

### 4.3 Lubrication and mounting position

### 4.3 Schmierung und Einbaulage

**Attenzione!** Nelle versioni HA e HF è indispensabile conoscere la posizione di lavoro in quanto nella configurazione V5 occorre posizionare in modo corretto il paraolio della vite per preservare la corretta lubrificazione della coppia d'ingranaggi cilindrici del primo stadio di riduzione.

**Warning!** It is fundamental to specify the mounting position specially when ordering HA and HF versions. This is because in the V5 configuration the oil seal on the worm shaft must be positioned properly to ensure the lubrication of the spur gearset of the first reduction stage.

**Achtung!** Bei den HA und HF Versionen ist die Information bez. die Einbaulage unbedingt erforderlich: in der V5 Bauform muss der Ölabdichtung auf der Schnecke korrekt eingebaut werden, um die Schmierung des Stirnradsatz der ersten Stufe aufrechtzuhalten.

**NOTA:** L'entrata supplementare nella serie H si trova nella posizione intermedia del cinematismo. Quindi, se utilizzata come comando, avrà la sola riduzione della coppia vite/corona. Se invece viene utilizzata come asse condotto, la sua velocità sarà quella in entrata ridotta dal rapporto 4:1 della precoppia.

**NOTE:** the second shaft of the H series gearboxes is placed in the intermediate position of the kinematic motion which if used as a drive will have only the reduction of the worm/wheel set. For the utilization as a driven shaft its speed will correspond to the input speed reduced by the ratio 4:1 of the pre-stage.

**BEMERKUNG:** das zweite Wellenende der Getriebe der Serie H befindet sich in der Mitte des Getriebes. Falls das zweite Wellenende als zusätzliche Antriebswelle genutzt werden, muss aufgrund der Vorstufe mit einer um 4:1 reduzierte Drehzahl eingetrieben werden.

#### 4.9 Limitatore di coppia cavo passante

#### 4.9 Torque limiter with through hollow shaft

#### 4.9 Drehmomentbegrenzer mit durchgehender Hohlwelle

Il limitatore di coppia viene consigliato in tutte quelle applicazioni che richiedono una limitazione sulla coppia trasmissibile per proteggere l'impianto e/o preservare il riduttore evitando sovraccarichi o urti indesiderati quanto inaspettati.

È un dispositivo con albero dotato di cavo passante, con funzionamento a frizione, ed è integrato al riduttore, presentando un ingombro limitato.

Concepito per lavorare a bagno d'olio, il dispositivo risulta affidabile nel tempo ed è esente da usura se non viene mantenuto in condizioni prolungate di slittamento (condizione che si verifica quando la coppia presenta valori superiori a quelli di taratura).

La taratura è facilmente regolabile dall'esterno attraverso il serraggio di una ghiera autobloccante che porta a compressione le 4 molle a tazza disposte tra loro in serie.

Il dispositivo non consente:

- l'impiego di cuscinetti a rulli conici in uscita
- funzionamento prolungato in condizioni di slittamento.

Nella tabella seguente vengono riportati i valori delle coppie di slittamento  $M_{2S}$  in funzione del n° di giri della ghiera.

I valori di taratura presentano una tolleranza del  $\pm 10\%$  e si riferiscono ad una condizione statica.

In condizioni dinamiche è da notare che la coppia di slittamento assume valori diversi a seconda del tipo e/o modalità in cui si verifica il sovraccarico: con valori maggiori in caso di carico uniformemente crescente rispetto a valori più contenuti in seguito al verificarsi di picchi improvvisi di carico.

**NOTA:** quando si supera il valore di taratura si ha slittamento. Il coefficiente di attrito tra le superfici di contatto da statico diventa dinamico e la coppia trasmessa cala del 30% circa.

È quindi opportuno prevedere uno stop per poter ripartire al valore di taratura iniziale.

The use of a torque limiter is advisable in case of applications requiring the limitation of the torque in order to safeguard the plant and/or the gearbox against unexpected and undesired overloads or shocks.

The torque limiter is equipped with a through hollow shaft and friction clutch. It is integrated in the gearbox, space requirement is therefore limited.

Designed to work in oil bath, it is reliable over time and is not subject to wear unless prolonged slipping occurs (it happens when the torque values are higher than the calibration values).

Calibration can be easily adjusted from the outside by tightening of the self-locking ring nut, which causes the compression of 4 Belleville washers arranged in series.

The use of the torque limiter does not go together with:

- the use of tapered roller bearings at output
- Prolonged operation under slipping conditions.

The following table shows the values of  $M_{2S}$  slipping torques depending on the number of revolutions of the ring nut.

Calibration values feature a  $\pm 10\%$  tolerance and refer to static conditions.

Under dynamic conditions, the values of the slipping torque differ depending to the type of overload: the values are higher if the load increase is uniform, the values are lower if sudden load peaks occur.

**NOTE:** Slipping occurs when the setting values are exceeded.

The friction coefficient between the contact surfaces from static becomes dynamic and the transmitted torque is approx. 30% lower.

It is advisable to have a stop first in order to have a restart based on the initial setting value.

Die Anwendung eines Drehmomentbegrenzers wird empfohlen, um die Anlage und das Getriebe gegen unerwünschte und unerwartete Überbelastungen und Stoßen zu schützen. Der Begrenzer verfügt über eine durchgehende Hohlwelle und eine Kupplung. Er ist in dem Getriebe integriert, d.h. der Raumbedarf ist klein.

Der Drehmomentbegrenzer wurde für Betrieb in Ölbad entworfen. Er ist zuverlässig über Zeit und verschleißfest (ausser wenn Rutschen für lange Zeit besteht: das passiert, wenn das Drehmoment höher als der Eichwert ist).

Die Eichung darf mühelos von aussen durch das Anziehen einer selbstsperrenden Mutter ausgeführt werden. Das Anziehen verursacht die Zusammendrückung der 4 wechselsinniggeschichteten Tellerfeder.

Die Vorrichtung sieht das folgende nicht vor:

- die Verwendung von Kegelrollenlager am Abtrieb
- Längerer Rutschbetrieb.

Die nachstehende Tabelle zeigt die Werte der Rutschmomente  $M_{2S}$  abhängig von der Zahl der Umdrehungen der Mutter.

Die Eichwerte weisen  $\pm 10\%$  Toleranz auf und beziehen sich auf statische Bedingungen.

Unter dynamischen Bedingungen hat das Rutschmoment verschiedene Werte je nach Art der Überbelastung. Die Werte sind höher, wenn die Belastung gleichmäßig zunimmt; sie sind niedriger im Falle von plötzlichen Belastungsspitzen.

**BEMERKUNG:** Rutschen tritt auf, wenn die eingestellten Werte überschritten werden. Der Reibungsfaktor zwischen den Berührungsf lächen wird dynamisch anstatt statisch und das übertragene Drehmoment sinkt um ca. 30%.

Es ist daher ratsam, vor dem erneuten Anfahren anzuhalten, um die ursprünglichen Drehmomentwerte zu erreichen.

E' importante notare che la coppia di slittamento non resta sempre la medesima durante tutta la vita del limitatore.

Tende infatti a diminuire in rapporto al numero e alla durata degli slittamenti che, rodando le superfici di contatto, ne aumentano il rendimento.

È quindi opportuno verificare periodicamente, soprattutto durante la fase di rodaggio, la taratura del dispositivo.

Là dove sia richiesto un errore più contenuto nella taratura, è necessario testare la coppia trasmissibile sull'impianto.

Il dispositivo viene consegnato tarato alla coppia riportata a catalogo  $T_{2M}$  salvo diversa indicazione espressa in fase di ordinazione.

*It is important to note that the slipping torque is not the same for the whole life of the torque limiter. It usually decreases in connection with the numbers and the duration of the slipping which because of the surfaces' lapping will increase the efficiency.*

*For this reason it is advisable to check the calibration of the device at regular intervals, specially during the running-in period.*

*Should a smaller calibration error be required, it is necessary to test the transmissible torque on the plant. The device is supplied already calibrated at the torque value reported in the catalogue  $T_{2M}$ , unless otherwise specified in the order.*

Es ist wichtig zu beachten, dass das Rutschmoment über die gesamte Lebensdauer der Rutschkupplung nicht konstant bleibt, sondern üblicherweise in Verbindung mit längeren Rutschzyklen aufgrund der eingelaufenen Berührungsflächen abnimmt.

Deswegen ist es ratsam, die Eichung der Vorrichtung besonders während der Einlaufzeit zu prüfen.

Falls ein niedriger Eichfehler verlangt wird, ist das übersetzbare Drehmoment auf die Anlage zu testen. Wenn die Vorrichtung geliefert wird, ist sie schon auf dem im Katalog  $T_{2M}$  angegebenen Wert geeicht (ausser wenn es in der Bestellung anders angegeben wird).

### 5.1 Caratteristiche

La combinazione di due riduttori a vite senza fine comporta rendimenti molto bassi, ma l'elevata riduzione di velocità ottenuta in uno spazio ridottissimo rende comunque interessante, e a volte insostituibile, questa soluzione. I riduttori a vite senza fine combinati sono disponibili nelle serie KX, XX e KK.

Le serie KX e KK sono disponibili esclusivamente nella versione p.a.m.

La serie XX è invece disponibile nella versione alberata XXA e nelle due versioni con predisposizione attacco motore in forma compatta XXC o con campana e giunto XXF.

Sono forniti con albero cavo di serie ed esiste un'ampia gamma di accessori: seconda entrata, cuscinetti conici sulla corona, flangia uscita, albero lento con 1 o 2 sporgenze, limitatore di coppia con cavo passante, braccio di reazione.

### 5.1 Characteristics

The combination of two worm gearboxes provides very low efficiency, however the fact that substantial reduction in speed can be obtained in an extremely reduced space makes this solution very interesting and sometimes irreplaceable. Combined worm gearboxes are available in series: KX, XX and KK.

The KX and KK series are available for IEC version only.

The XX series is available in the XXA version with shaft and in two versions with motor coupling: XXC (compact) and XXF (with bell and joint).

The hollow shaft is supplied as standard. A broad range of accessories is available: second input, tapered roller bearings on the worm wheel, output flange, single or double extended output shaft, torque limiter with through hollow shaft, torque arm.

### 5.1 Merkmale

Die Kombination zweier Schneckengetriebe bringt sehr niedrigen Wirkungsgrad mit sich, es handelt sich jedoch um eine interessante und manchmal unersetzbare Lösung, weil hohe Drehzahlverringern in einem beträchtlich reduzierten Raum erhalten werden kann. Kombinierte Schneckengetriebe sind in Serien erhältlich: KX, XX und KK.

Die Serien KX und KK sind nur mit IEC-Motoranbau verfügbar.

Die Serie XX ist mit Welle (XXA Version), oder mit Kupplung für Motoranschluss (XXC kompakt und XXF mit Glocke und Verbindsstück) lieferbar.

Die Hohlwelle gehört zur serienmäßigen Ausstattung. Eine breite Auswahl an Zubehör ist erhältlich: zweiter Antrieb, Kegelrollenlager auf Schneckenrad, Abtriebsflansch, Standard oder doppelseitig herausragende Abtriebswelle, Drehmomentbegrenzer mit durchgehender Hohlwelle, Drehmomentstütze.

### 5.3 Lubrificazione e posizioni di montaggio

I riduttori a vite senza fine combinati sono forniti completi di lubrificante sintetico a base PAG con indice di viscosità ISO VG320. Si raccomanda di precisare sempre in fase di ordine la forma costruttiva e la posizione di lavoro desiderata.

### 5.3 Lubrication and mounting position

Combined worm gearboxes are supplied with synthetic lubricant, PAG base, viscosity index ISO VG320. Always specify the version and the mounting position when ordering.

### 5.3 Schmierung und Einbaulage

Kombinierte Schneckengetriebe werden mit synthetischem Schmiermittel auf PAG Basis und Viskosität Index ISO VG320 geliefert. Im Auftrag sind immer Einbaulage und Bauform anzugeben.

**kg**

\* **ATTENZIONE:** la coppia massima utilizzabile [ $T_{2M}$ ] deve essere calcolata utilizzando il fattore di servizio:  $T_{2M} = T_2 \times FS'$

\* **WARNING:** Maximum allowable torque [ $T_{2M}$ ] must be calculated using the following service factor:  $T_{2M} = T_2 \times FS'$

\* **ACHTUNG:** das max. anwendbare Drehmoment [ $T_{2M}$ ] muss mit folgendem Betriebsfaktor berechnet werden:  $T_{2M} = T_2 \times FS'$

\* Limitatore L1 nei combinati

\* L1 torque limiter in combined gearboxes

\* L1 Rutschkupplung in kombinierten getrieben

La versione con limitatore sul riduttore in entrata (L1), anche se composta da componenti standard, deve considerarsi una esecuzione speciale dal punto di vista dell'utilizzo.

Infatti il valore di taratura del limitatore L1, anche se al valore minimo, genera una coppia sul secondo riduttore molto elevata, spesso al di sopra del limite massimo ammesso.

Anche la precisione di taratura, di conseguenza, è molto bassa: infatti ogni variazione della coppia sul primo riduttore va moltiplicata per il rapporto del riduttore uscita.

La scelta del limitatore in entrata (L1) non può assolutamente essere motivata dal prezzo inferiore rispetto a quello in uscita. L'utilità di questa versione potrebbe invece nascere dalla necessità di avere una limitazione nella trasmissione della potenza del motore ma, nel contempo, di avere sul riduttore in uscita una irreversibilità senza il rischio di slittamento.

Per queste ragioni il limitatore in entrata (L1) viene fornito in posizione libera, cioè con taratura a cura del cliente secondo le proprie esigenze.

*The version with torque limiter on the gearbox at input (L1), although made of standard component, is to be regarded as a special execution from the utilization point of view.*

*Actually, the L1 limiter calibration value, even though set to its minimum, generates on the second gearbox a very high torque which often exceeds the maximum admissible value.*

*As a consequence, calibration is not precise: any variation of the torque on the first gearbox is to be multiplied by the ratio of the gearbox at output.*

*The choice of the limiter at input (L1) cannot be based on the fact that the price of the limiter at input is lower than that at output. Nevertheless, this is a good solution if the application requires at the same time both the limitation of the power transmitted by the motor and irreversibility on the second gearbox in order to prevent sliding. For the above mentioned reasons, the torque limiter at input (L1) is supplied in free position, i.e. the customer will carry out the limiter calibration according to the customer's requirements.*

Die Ausführung mit Rutschkupplung an dem Getriebe am Antrieb (L1), obwohl aus Standard Bestandteile, ist eine Sonderausführung mit Bezug auf die Anwendung.

Der Eichungswert der L1 Rutschkupplung, auch der mindeste, erzeugt an das zweite Getriebe ein sehr hohes Drehmoment, das oft den max. zulässigen Wert überschreitet.

Daraus folgt, dass die Eichung nicht präzise ist: jede Änderung des Drehmoments an dem ersten Getriebe soll mit dem Verhältnis des zweiten Getriebes multipliziert werden.

Der Grund für die Wahl der Rutschkupplung am Antrieb (L1) darf nicht der niedriger Preis sein.

Diese Ausführung ist jedoch bemerkenswert, falls die Applikation sowohl die Begrenzung der Motorleistung als auch die Irreversibilität des zweiten Getriebes verlangt.

Folglich wird die Rutschkupplung am Antrieb (L1) frei gestellt, d. h. der Kunde soll die Rutschkupplung nach seiner Bedürfnisse eichen.

5.8 Esecuzione con vite bisporgente

5.8 Double extended worm shaft design

5.8 Versionen mit Doppelseitig Herausragender Schneckenwelle

SeA1

SeA2

L'entrata supplementare del riduttore in uscita (SeA2) non può essere utilizzata come comando in quanto il relativo movimento risulta impedito dalla irreversibilità del primo riduttore. Utilizzato come asse condotto, avrà velocità corrispondente a quella di ingresso ridotta del rapporto del primo riduttore.

The second input shaft of the output gearbox (SeA2) can not be utilized as a drive because its motion will be stopped by the reversibility of the first gearbox. If utilized as a drive shaft its speed will be equal to the input speed decreased by the ratio of the first gearbox.

Die verlängerte Schneckenwelle des zweiten Getriebes (SeA2) kann nicht als Antrieb verwendet werden, da die Selbsthemmung des ersten Getriebes entgegengewirkt. Wird sie als Abtriebswelle verwendet, besitzt sie eine um die Untersetzung des ersten Getriebes entsprechend reduzierte Drehzahl und Drehmoment.

La serie APS comprende riduttori costruiti appositamente per soddisfare delle specifiche esigenze di automazione. Il cinematismo, composto da una vite senza fine e due corone, consente di disporre, all'uscita, di due alberi cavi con una rotazione sincrona controrotante. La motorizzazione può essere effettuata tramite motori elettrici o motorvariatori provvisti di una flangia di fissaggio dimensionata a norme IEC.

*APS series includes gearboxes specially manufactured in order to comply with specific requirements. The kinematic motion is carried out by means of a wormshaft and two worm-wheels in order to have two output shafts with a synchronous rotation. These gearboxes can be assembled to electric motors or motorvariators equipped with a fixing flange with dimensions conforming to IEC specifications.*

### 6.1 Caratteristiche

- **Corpo e flange**  
Costruiti in alluminio e verniciati colore BLU RAL 5010
- **Vite senza fine**  
In acciaio legato. Indurita tramite cementazione e tempra e finita di rettifica
- **Corona**  
Fascia dentata in bronzo GcuSn12 UNI 7013 riportata di fusione su mozzo in ghisa G20 UNI 5007
- **Cuscinetti**  
Sulla vite e sulle due uscite sono montati cuscinetti a rulli conici
- **Lubrificazione**  
Normalmente i riduttori vengono forniti privi di lubrificante. Su richiesta possono essere forniti con lubrificante sintetico

### 6.1 Characteristics

- **Casing and flanges**  
*Made from aluminium and painted BLUE RAL 5010*
- **Worm screw**  
*Made from alloy steel. Hardened and case-hardened then finished by grinding*
- **Worm wheel**  
*UNI 7013 GcuSn12 bronze toothed band. Inserted by casting on UNI 5007 G20 cast-iron hub.*
- **Bearings**  
*Taper roller bearings are mounted on the screw and on the two outputs*
- **Lubrication**  
*Gearboxes are normally supplied without lubricant. However, they can be supplied with synthetic lubricant on request*

### 6.1 Merkmale

- **Gehäuse und Flansche**  
Aus Aluminium gefertigt und mit Farbe BLAU RAL 5010 lackiert
- **Schnecke**  
Aus legiertem Stahl. Gehärtet durch Einsatzhärtung und Abschreckhärtung mit Fertigschliff
- **Zahnkranz**  
Zahnband aus Bronze GcuSn 12 UNI 7013, aufgegossen auf Nabe aus Gusseisen G20 UNI 5007
- **Lager**  
Auf der Schnecke und auf den beiden Abtrieben werden Kegelrollenlager montiert.
- **Schmierung**  
Normalerweise werden die Getriebe ohne Schmiermittel geliefert. Auf Anfrage können sie mit synthetischem Schmiermittel geliefert werden

- ▽ Scarico / Drain / Ablass

#### 6.5 Carichi radiali e assiali

Nella tabella sono indicati i valori, espressi in N, dei carichi radiali e assiali ammissibili su ogni singola uscita. Il carico radiale  $F_{r2}$  si considera applicato ad una distanza dalla battuta dell'albero cavo pari al valore del diametro. I valori indicati hanno come limite la struttura del riduttore, perciò non variano al diminuire della velocità, cosa che normalmente avviene quando il limite è riferito ai cuscinetti.

#### 6.5 Radial and axial loads

In the table, the permissible radial and axial loads for each individual output are shown as N. The radial load  $F_{r2}$  should be considered as applied at a distance from the shaft shoulder equal to the diameter figure. The listed values are limited by the gear drive structure, therefore, they will not change as the speed decreases, which is normally the case when bearings are the limit reference.

#### 6.5 Radial und Axial Belastungen

In der Tabelle werden die Werte der auf jedem einzelnen Abtrieb zulässigen Radial- und Axialbelastungen in N angegeben. Hinsichtlich der radialen Belastung  $F_{r2}$  wird von einem Abstand vom Anschlag der Hohlwelle ausgegangen, der dem Wert des Durchmessers entspricht. Die angegebenen Werte werden durch die Struktur des Getriebes beschränkt und verändern sich daher bei Reduzierung der Drehzahl nicht. Dies ist normalerweise dann der Fall, wenn der Grenzwert sich auf die Lager bezieht.

Tipo Size Typ	<b>135</b>	<b>150</b>	<b>170</b>	<b>230</b>
$F_{r2}$ [N]	1200	1900	1700	3000
$F_{a2}$ [N]	600	950	850	1500

### 8.1 Principio di funzionamento del variatore

Si tratta di una trasmissione epicicloidale a rapporto variabile.

Quando il motore aziona il solare (5-6), i satelliti (8) sono indotti a ruotare sul proprio asse e, contemporaneamente, per effetto del vincolo con la pista esterna fissa (7) e la pista esterna mobile (9), ad un movimento di rivoluzione che trascina in rotazione il portasatelliti (albero uscita).

Variando la posizione assiale della pista esterna mobile (9) tramite la vite di comando, l'anello portasatelliti (14) e la camma fissa (15), i satelliti sono costretti a variare la loro posizione radiale di rivoluzione. In tal modo i diametri di rotolamento cambiano, così come la velocità angolare dell'albero uscita.

Quando il contatto di rotolamento con le piste esterne (7) (9) si trova verso il centro del satellite (8), la velocità di rivoluzione è più bassa: l'albero uscita ruoterà più lentamente ma avrà disponibile un maggior momento torcente.

#### Attenzione

La regolazione della velocità si può effettuare SOLO col variatore in funzione, MAI a macchina ferma.

### 8.1 Variator operating principle

*The mechanical variator is based on an epicyclic transmission for variable ratios.*

*The motor rotates the solar rings (5-6) which rotate the satellites (8). In turn these are in contact with the fixed outer ring (7) and external mobile ring (9).*

*The satellites rotate around their axes while simultaneously originate the rotation of the satellite carrier (output shaft).*

*When the rolling contact point of the outer rings (7) (9) is near the center of satellites (8) the output speed will reduce: the output shaft will rotate more slowly thus increasing the output torque value.*

#### Warning

*Speed adjustment is only possible when variator is running, never adjust speed while variator is stationary.*

*This will result in damage to the variator.*

### 8.1 Betriebsprinzip

Es handelt sich um ein Planetengetriebe mit verstellbaren Übersetzungsverhältnis.

Der Motor setzt das Sonnenrad im Gang (5-6) und als Folge drehen die Planetenräder. Gleichzeitig, dank der Verbindung zwischen der unbeweglichen (7) und der beweglichen (9) äußeren Laufbahnen, ist die Drehung dem Planetenträger (Abtriebswelle) übertragen.

Durch Abtriebswelle, Kugelring (14) und Nocke (15) ändert die Axiallage der beweglichen Laufbahn (9); infolgedessen ändert die Radiallage der Planetenräder auch. Auf diese Weise ändern die Rollendurchmesser und die Winkelgeschwindigkeit der Abtriebswelle.

Wenn der Kontaktpunkt zwischen Planetenrädern und äußeren Laufbahnen (7) (9) näher dem Mittelpunkt der Planetenräder ist, ist die Geschwindigkeit niedriger: Die Abtriebswelle dreht langsamer doch nimmt das Drehmoment zu.

#### Vorsicht

Die Geschwindigkeit kann nur verstellt werden, wenn das Verstellgetriebe im Betrieb ist und NICHT wenn es stillliegend ist.

## 8.2 Variatori

I variatori meccanici serie N sono in alluminio nelle grandezze 003, 005, 010, 020, 030, 050 per potenze da 0.18 kW a 4 kW.

## 8.3 Caratteristiche

- La carcassa in alluminio, oltre ad una migliore estetica, comporta un minor peso del variatore rendendone più convenienti applicazioni e trasporti.
- Sul modulo base è possibile montare, in modo semplice e veloce, flangia uscita o piede, a seconda delle necessità. Questo riduce i volumi di stoccaggio ed i tempi di consegna.
- Il lato di entrata del variatore è chiuso, parte integrale col corpo: questo rende più facile l'installazione ed elimina totalmente la possibilità di perdite d'olio.
- È previsto, come standard, il collegamento a motori a dimensioni IEC forma B5.
- Il tappo di scarico olio è del tipo a magnete: la lubrificazione più pulita consente intervalli di manutenzione più lunghi.
- Funzionamento in bagno d'olio, silenzioso, con elevato rendimento ed esente da vibrazioni.
- Il funzionamento è possibile in entrambi i sensi di rotazione con entrata ed uscita concordi.
- Campo di variazione 1 - 6.
- L'albero di comando è bisporgente ed è quindi accessibile, per la manovra, da entrambe le estremità.

## 8.2 Variators

*The series N mechanical variators consist of size 003, 005, 010, 020, 030 and 050 with power ranges of 0.18 kW to 4 kW are constructed from aluminium.*

## 8.3 Characteristics

- *Alluminium construction of housing benefits weight reduction for more convenient applications and transportation.*
- *The simple design allows both foot or flange mounting to standard unit, reducing stocking levels and allowing quick delivery.*
- *The closed input flange is an integral part of the variator casing for easy installation and prevents possibility of oil leaks.*
- *IEC B5 motor connections available as standard.*
- *The magnetic breather plug maintains clean lubricant and extends maintenance intervals.*
- *The oil bath operation provides high efficiency for noiseless, vibration free running.*
- *The unit can operate in both directions, input and output shafts rotate in same direction.*
- *Range of variation 6 - 1 reduction.*
- *Hand wheel can be fitted to both sides of control box for convenient installation.*

## 8.2 Verstellgetriebe

Die mechanischen Verstellgetriebe Serie N sind aus Aluminium in den Größen 003, 005, 010, 020, 030, 050 für Leistungen von 0,18 kW bis 4 kW.

## 8.3 Merkmale

- Dank dem Gehäuse aus Aluminium ist das Verstellgetriebe sehr leicht, was zur erleichterten Anwendung und Transport dient.
- Auf das Grundmodul können entweder Abtriebsflansch oder Fuß montiert werden. Das bringt Raumersparnis und schnellere Lieferzeit mit sich.
- Die Antriebsseite ist geschlossen und integrales Bestandteil des Gehäuses: Installation ist einfacher und Ölverluste sind ausgeschlossen.
- Standard-Anbau zu IEC B5 Motoren.
- Magnet-Ölablassschraube: die reinigere Schmierung erlaubt längeren Wartungsintervallen.
- Betrieb im Ölbad ist geräuschlos, mit erhöhter Leistung und vibrationsfrei.
- Betrieb ist in beide Drehrichtungen möglich, mit Antriebs- und Abtriebswellen in derselben Richtung drehend.
- Variationsbreite 1 – 6
- Das Steuer-Handrad ist doppelseitig hervorstehend: es kann von beiden Enden bedient werden.

I diagrammi seguenti riportano le curve di coppia riferite alle varie potenze applicate e al numero di giri in entrata al variatore  $n_1$  ( $\text{min}^{-1}$ ).

The following diagrams show the performance for output torque in relation to input power and input speed  $n_1$  ( $\text{min}^{-1}$ ).

Die folgende Diagramme zeigen die Drehmomentkurven bezüglich Leistung und Antriebsdrehzahl.

### 8.6 Lubrificazione

I variatori vengono forniti completi di lubrificante. Dopo il piazzamento del variatore assicurarsi che il livello del lubrificante sia visibile dall'apposita spia di livello effettuando eventuali rabbocchi se necessario, con un analogo lubrificante scelto fra quelli raccomandati in tabella.

### 8.6 Lubrification

The variators are supplied complete with lubricant. It is important to have the correct level of lubrication for the final mounting position chosen. Ensure the oil can be seen through the oil level plug this to allow the filling up if necessary.

### 8.6 Schmierung

Die Verstellgetriebe werden mit Öl geliefert. Nach Einbau des Verstellgetriebes ist der Ölstand durch das Schauglas zu prüfen. Wenn notwendig, füllen Sie mit einem der empfohlenen Öle auf (s. Tafel).

## CONDIZIONI GENERALI DI GARANZIA

La garanzia relativa a difetti di costruzione ha la durata di un anno dalla data di fatturazione delle merce. Tale garanzia comporta per la TRAMEC l'onere della sostituzione o riparazione delle parti difettose ma non ammette ulteriore addebiti per eventuali danni diretti o indiretti di qualsiasi natura. La garanzia decade nel caso in cui non siano state osservate le disposizioni riportate nel manuale di uso e manutenzione e/o siano state eseguite riparazioni o apportate modifiche senza nostro consenso scritto.

**La merce di ritorno sarà da noi accettata solo se spedita franco di ogni spesa.**

## WARRANTY GENERAL CONDITIONS

*Gearboxes are covered for manufacturing defects by a one-year warranty from their invoicing date. TRAMEC will replace or repair defective parts but will not accept any further charges for direct or indirect damages of any kind. The warranty will become null and void if the instructions given in the use and maintenance manual are not complied with or if repairs or changes are carried out without our prior written authorization.*

***Returned goods will be accepted only if delivered free of any charge.***

## ALLGEMEINE GARANTIEBEDINGUNGEN

Die Garantie auf Herstellungsfehler dauert ein Jahr ab Rechnungsdatum. Aufgrund Garantie unterliegt der TRAMEC die Pflicht der Ersetzung oder Reparatur der defekten Teile, jedoch nicht die Übernahme weiterer Belastungen für direkte oder indirekte Schäden egal welcher Natur. Die Garantie verfällt bei Nichtbeachtung der in der betreffenden „Betriebs- und Instandhaltungsanleitung“ angeführten Anweisungen und/oder falls ohne unsere vorausgehende schriftliche Genehmigung Reparaturen oder Änderungen vorgenommen wurden.

**Die an uns zurückgesendete Ware akzeptieren wir nur wenn gebührenfrei geliefert.**

## REVISIONI

10/2010 - Inserita nuova grandezza 130.

## REVISIONS

10/2010 - Inserted new size 130.

## Änderung

10/2010 - Größe 130 eingefügt.

# 10/2010

Questo catalogo annulla e sostituisce ogni precedente edizione o revisione. Tutti i dati elencati sono indicativi e s'intendono senza impegno alcuno da parte nostra. Ci riserviamo il diritto di apportare modifiche senza preavviso.

*This catalogue cancels and replaces any previous edition and revision. All listed data are approximate and it's understood that this entails no obligation on our part. We reserve the right to implement modifications without notice.*

Mit der Ausgabe dieses Katalogs annullieren sich gleichzeitig alle bisherigen Katalogen. Sämtliche Daten sind Berechnete Werte die für den Verkäufer unverbindlich sind. Der Verkäufer behält sich das Recht vor, Änderungen, ohne eine vorhergehende Advisierung durchzuführen.
